SKIN CANCER.

Several years ago I was called to see a colored woman who had a malignant form of cancer on her foot. The cancer grow women under the prescribed treatment, and the toes and one side of the foot were at length easter entirely away. The patient could not have survived much longer, but I commenced the use of Swift's Spe-cific, and it cured her sound well. That was three years ago, and there has been no re-turn of the disease. I regard Swift's Specific a most excellent modicine for blood diseases, as its tendency is to drive out the polson. Matherville, Miss. Wa. E. STAGG, M. D.

MARION OIL FIELD

Reports from the Hamilton Wel Said to be Exaggerated.

BIG TERRITORY IS OPENED,

However, and the Men who Are Crying it Down Happen to be Those who are After Leases-A Promising Field at Least.

Mannington Special in Pittsburgh Dispatch of Mon

From Oil City the Dispatch received private information that rumor had it that the new oil field was likely to eclipse the Lima field in productiveness, and that one company alone had leased 30,000 acres. After the first grand spurt of the Hamilton well it had been shut up and closely guarded. The "mystery" tactics were used with an effectivenes that defied overthrow. It was then that the Dispatch correspondent came down to this region to make thorough and im-

partial investigation,

It is well enough to state right here that he didn't find any 1,000-barrel well nor anything that indicated that the re-

that he didn't find any 1,000-barrel well nor anything that indicated that the region was likely to equal the prolific Lima field; nor did he find that any one company had leased over 933 square miles of territory. But he did find that the oil belt of West Virginia is likely to produce much oil in the near future, and oil of a superior quality.

From the time the oil was struck up to Thursday afternoon, October 31, the Hamilton well was worked as a mystery, being carefully boarded up and closely guarded. On Thursday the guard was removed, and, when the correspondent visited the well, there was not a soul to be seen around it, nor was there any attempt at concealment. The reason for this change of tactics will appear further on. At the time of the visit to the well it was as quiet as the surrounding hills. But it had flowed for a few minutes during the day previous into a small tank with which pipes had been connected after the first big spurt.

From Mr. Fleming Hamilton, the owner of the farm on which the well is drilled, it was learned that a small flow occurred every twelve or fourteen hours. That is, the accumulation of gas in the well under the oil which gradually gathered in the hole, forced the heavier liquid up about once a day. The tank with which the pipes are connected will not hold more than fifty barrels. On Friday the well was capped and plugged to prevent any further flow while waiting for pumping machinery, which has been ordered. When the well was capped there were not more than thirty or forty barrels of oil in the tank, as near as could be ascertained by climbing on top of it and looking through the gas vent hole of the cover. This, positively, is all the well has done so far, yet a Wheeling paper of Friday morning, under a display head, said:

"The Hamilton well, which has been kept by its proprietors a secret, is no longer a mystery. Yesterday it gave to the bidder tanks regularly."

Rot 500 barrels. Oil is flowing freely into the hidder tanks regularly."

It is needless to remark that the 5

NOT 500 BARRELS & DAY.

Not 500 barrels A Day.

It is needless to remark that the 500-barrels-per-day idea caused many amused smiles among the shrewd oil operators here, who knew the facts and read the paper. There was some talk of organizing a battalion to go out and search tor the "hidden" tanks; but it was abandoned on account of the weather, and the intense absurdity of seeking for a hidden thing which was bot hidden any more than is "a city set upon the hills." It is not at all possible yet to determine what the Hamilton well may do eventually. Ou account of the jealousy naturally existing among rivals in business, the oil operators here searching for leases seek facts and express views as will best suit their own interests, and they do not agree upon a unanimous verdict. Same say that it has gone through-the Gordon sand, and that as a pumper the well will not be better than a five-barreler. Others with equal confidence assert that it will be about a twenty-five barrel producer. None go higher than the latter figure.

Yet mark this fact: All of them want leases! If they can convince the farm ers that the territory is only wildcat, they can get leases at a much less bonus than if they admitted that the Hamilton well is likely to prove a big producer.

The actual depth of which the Hamilton well has been loved in 1844 feet.

district. It is not necessary to draw the moral.

So much attention has been given in the foregoing to the Hamilton well, for the reason that it is the key to the situation. The finding of oil, either in small or large quantity at that point, settled the question as to the continuity of the oil belt. Whatever the Hamilton well may yet do, it is certain there is oil in the territory; and it may be a big field. One experienced operator says he believes it is a pocket field of y. He was hunting leases, however.

AN INTERESTING STORY.

But how came anyone to go into the

sunting leases, hookever.

An interesting strony.

But how came anyone to go into the wildest kind of wildeat territory, land which no oll operator ever dreamed would produce oil, and bore a hole? That question leads up to the story.

Prol. H. C. White, State Geologist of West. Virginia, became convinced, through his investigation, that there was oil in localities not hitherto supposed to be petroleum territory. Long before the first producing well was found at Mt. Morris, which is in Pennsylvania, just beyond the line of Monongalia county, West Virginia, Prof. White had followed the Pennsylvania oil belt from that point through Monongalia and Marion counties up, to, and for some miles south of Mannington. The outcroppings of the rock appeared on the east side of the bett at a general average of about forty, we degrees southweet of Mt. Morris. He calculated that the east side of the bett at the east side of the bett would probably produce gas wells, on the west side oil. The average width of the belt is three miles, according to surface indications, Acting upon the faith of his convictions, Prof. White associated with himself Prof. T. M. Jackson, a civil engineer, of Morgantown, and Clarence Smith, of Fairmont, and the company proceeded to visit the farmers in the neighborhood of Mannington to procure leases of land under guarantees of the set within three years. Before any work within three years. Before any w

Children Cry for Pitcher's Castoria.

they can get leases at a much less bonus than if they admitted that the Hamilton well is likely to prove a big producer.

The actual depth of which the Hamilton well-has been bored is 1,804 feet. The oil that was found was in the Big Injun sand. The drill went down 14 feet in the slate beneath the Big Injun, and there stopped, ostensibly for fear that the salt water might be struck.

But there is strong reason for asyling that the fear of salt water might be tool to the marines, those hermaphrodites of the sea who are credited with guillbillity. The Gordon sand is not reached in the Mt. Morris district short of 2,100 feet; if the calculations in regard to the dip of the various strata are correct, it could not be found at the point where the Hamilton well is located, than there is a my more salt water be tween the Big Injun and Gordon sands, at the point where the Hamilton well, for the region that it is the key to the situation. The finding of oil, either in small or large quantity at that point, settled the foregoing to the Hamilton well, for the region of the various hards are district. It is not necessary to draw the more good than anything she has yet focus the foregoing to the Hamilton well, for the region that it is the key to the situation. The finding of oil, either in small or large quantity at that point, settled the foregoing to the Hamilton well, for the region that it is the key to the situation. The finding of oil, either in small or large quantity at that point, settled the quantity at that point where the foregoing to the Hamilton well, for the region of the continuity of the oil belt. Whatever the Hamilton well is now under the point where the foregoing to the Hamilton well is to cated, that there is no main the point where the foregoing to the Hamilton well is located, that there is no main the point where the foregoing to the Hamilton well is located, that there is no main the point where the foregoing to the Hamilton well is located, the point where the foregoing to the Hamilton well will b

tion, or money refunded. Price 35 cents of both times with the second of the second of

Hamilton farm, about a mile and a half from Mannington, and that is how the Hamilton well became an entity.

The original company, consisting of the three persons already named, look in a fourth partner for the purpose of development. This person is Mr. John Montgomery, of Washington, Pa., who agreed to put down the wells in two tracts for three-fourths of the oil.

Was he who bored the Hamilton well.

Now there is a very bitter feeling against the original company, and against Prof. White specially. Mr. J. H. Furbee, of this place, who is a member of the State Senate, owner of much land a lumber manufacturer, merchant and in various ways prominent and active in the State Senate, owner of much land a lumber manufacturer, merchant and in various ways prominent and active in the State Senate, owner of much land a lumber manufacturer, merchant and in various ways prominent and active in the State Senate, owner of much land a lumber manufacturer, merchant and in various mays prominent and active in the State Senate, owner of much land in this community, was one who put in 200 aeres at the start. He now says that the White Company did not stop at the 2,500 acres, but went on until they secured many thousands.

No one can tell exactly how many acres the White Company did not stop at the 2,500 acres, but went on until they see their neighbors getting bonuses. Prof. White's geological knowledge and his business acumen were demonstrated by the finding of oil.

The Hamilton and Plum run wells are the only two which have been drilled in the Manington district, but preparation for others are being pushed with the same states in the Residing and Kanne. Prof. White's geological knowledge and his business acumen were demonstrated by the finding of oil.

The Hamilton and Plum run wells are the only two which have been drilled in the Manington district, but preparation for others are being pushed with the district but progress was made in the seading and Kanne. Prof. White's geological knowledge and his business acumen were dem
